Summary

Product-minded Full Stack and AI Engineer experienced in building scalable applications, multi-agent systems, and production voice AI infrastructure. Combines hands-on engineering with product thinking, end-to-end ownership, client delivery, model evaluation and optimization, and technical team leadership.

Experience

The Product Highway

Apr 2026 – Present

Product Engineer

- Architected and built voice AI platform for creating, deploying, benchmarking, and orchestrating voice agents and workflows, with seamless access to local and hosted models across **88+ vendors and 440+ models**.
- Built and delivered **YEAPP**, a modern voice-first social media product for **KRAFTON (the PUBG MOBILE company)**, taking it from development to production and live on the Google Play Store in **under 40 days**; owned its voice AI infrastructure and managed backend and frontend services.
- Designed model benchmarking and evaluation capabilities for latency and cost, and developed an automated model router to select suitable available models based on task requirements.
- Reduced voice-calling costs for an NDA-protected client from approximately **INR 4–5 per minute to INR 0.7–1.3 per minute** through model and infrastructure optimization.
- Built and delivered client POCs across healthcare AI intake, gaming voice moderation for Gameberry Labs' Ludo Star, AI interviewing, and other voice AI use cases.
- Created an internal frontend design skill and design-system guidance to improve consistency, maintainability, and quality of AI-generated frontend code.

Jivi AI

May 2024 – Apr 2026

Software Development Engineer II

Gurugram, India

- Built a node-based multi-agent workflow system supporting agent orchestration, tool execution, conditional flows, and auto-generated APIs.
- Architected scalable micro-frontend systems and a unified design system focused on performance, modularity, and maintainability.
- Designed LLM memory architectures (short-term, long-term, and episodic) to improve contextual reasoning and multi-turn interactions.
- Implemented large-scale LLM evaluation pipelines for bulk workflow testing, response-quality scoring, prompt evaluation, and feedback-driven improvements.
- Developed agent versioning and rollout mechanisms with controlled deployments, A/B testing, and iterative optimization.
- Developed semantic product search and recommendation systems using embeddings and OpenSearch, enabling intelligent retrieval across healthcare datasets.
- Built a real-time, camera-based heart-rate monitoring system using MediaPipe, estimating heart rate from facial and finger-based signals and achieving **99.2%** accuracy.

Sudoviz

Mar 2023 – May 2024

Senior Software Engineer

California, United States (Remote)

- Contributed to the development of Sudoviz, an AI-assisted application security platform for identifying, tracking, managing, and resolving vulnerabilities across software repositories.
- Built AI-powered code-analysis workflows and a VS Code extension to scan GitHub repositories, surface security vulnerabilities, and help developers investigate and remediate issues.
- Developed and optimized backend APIs, reducing redundant requests and improving application responsiveness; implemented role-based access control and OAuth integrations for secure repository connectivity.

PakkaProfile

Jan 2022 – Nov 2022

Software Engineer

Bengaluru, India

- Developed scalable psychometric assessment platforms using React and React Native.
- Led Next.js website optimization, improving load times by over 100% and enhancing user experience.
- Implemented Unity navigation with mini-map and compass components for point-to-point guidance in an interactive environment.

Technical Skills

Languages: JavaScript, TypeScript, Python, C++
Frontend: React.js, Next.js, React Native, Micro-frontends, Design Systems
AI / LLM: Generative AI, Multi-Agent Systems, LangChain, LangGraph, Agent Workflows, Prompt Engineering, RAG, Embeddings, Vector Databases, OpenSearch, LLM Evaluation, Monitoring, Tracing, Observability
Voice AI: Voice Agents, Real-Time Voice AI, WebRTC, Speech Workflows, Model Routing, Model Benchmarking, Local and Hosted Models
Backend / Infrastructure: Node.js, Express.js, FastAPI, Flask, Django, REST APIs, WebSockets, MongoDB, Docker, Kubernetes, AWS
Core: System Design, Distributed Systems, Real-Time Systems, API and Database Design, Agile Methodology

Education

Jamia Hamdard	2020 – 2022
<i>Master of Computer Application</i>	<i>New Delhi, India</i>
Jamia Hamdard	2017 – 2020
<i>Bachelor of Computer Application</i>	<i>New Delhi, India</i>
